About Me

As a self-taught developer with a passion for full-stack development, I have honed my expertise in crafting advanced web applications and services using Java and NodeJS. With over 6 years of professional experience, I have demonstrated my ability to deliver high-quality code and exceptional results in numerous companies in Europe, North America and Latin America.

Since I started my career when I was 17 years old, I have remained committed to constant learning and improvement. I frequently pursue personal software projects to explore new technologies and further develop my skills. This dedication to learning and staying up-to-date with industry trends has allowed me to provide innovative solutions to my clients and maintain a competitive edge in the marketplace.

Experience

Boombit, Senior Frontend Developer

May 2024 - Present, Nicaragua, Remote.

Developed entire marketing and presentational sites from scratch resulting in catchy and viral marketing experiences for users. Migrated a whole Hygraph codebase with AEM Headless and Universal Editor in record time for major US companies. Also maintained and enhanced the codebase for several projects and internal tools. Mentored junior developers to good code practices, problem solving strategies, codebase management and related topics.

Jobchain GmbH, Full Stack Developer

May 2023 - April 2024, Austria, Remote.

Fully developed localization services in serverless environments with OpenAI and Python. In charge of development, design and maintenance of several services such as: main website, labor app, user management app for this financial service company. With tools like: NextJS, Typescript, NestJS and MongoDB.

Dotsub, Full Stack Developer

Dec 2021 - April 2023, New York, remote.

Migrated, updated, designed and enhanced the UI / UX for a complex B2B platform with thousands of

users by doing gradual and incremental releases without disturbing the flow of the current users. Feedback gathered indicated that the majority of our user base found the changes refreshing, convenient and useful. Also optimized media encoding processes that saved the company money by not having to rely on third party encoding services.

Jobchain GmbH, Full Stack Developer

May 2020 – Sept. 2021, Austria, Remote.

Redesigned, enhanced and updated numerous landing websites that enhanced the brand presence online. Integrated all those sites with localization services that I also developed using AWS Cloud Services so we could capture audiences in more than 20 languages.

Mowjow, Full Stack Developer

October 2019 – March 2020, Remote.

Developed numerous affiliate marketing services integrated with Telegram bots. Designed and implemented high converting landing pages to convert high volumes of traffic into marketing processes. Maintained and created blogs to give updates to Mowjow's community.

Themeforest, Freelancer

September 2017 – 2022, Remote.

Made website templates for GhostCMS. My templates are in the Top 10 of the most sold themes (Ghost). Began to work on them when I was on highschool. Became a 5-star seller / author and gathered experience with customer service and support.

Fiverr, Freelancer

October 2019 – March 2020, Remote.

A 5-star freelancer with more than 20 jobs completed. I had gig's ranging from Ghost CMS template development to back-end development with NodeJS.

Personal Projects

These are projects that I did outside my professional career or by freelancing but still show my abilities as Full stack developer.

Subtera

subtera.com

A website integrated with Ghost CMS where we publish weekly news related to the local musical scene, DJ podcasts, and local events. We also recommend music of all genres. With active profiles on Instagram and Youtube. [Link here](#) (subteramusic.com).

Denti

dentidoral.com

A landing page made with NextJS for dental services in Doral, Miami. [Link here](#) (dentidoral.com).

Dotsub Demo

Dotsub-demo.vercel.app

A front-end app that uses Local Indexed DB to save your photos and albums with ease. Made on React and TailwindCSS. You can see the project running [here](#) (dotsub-demo.vercel.app), and the repository [here](#) (github.com/Xaes/dotsub-demo).

Stack

Front-end: React, Tailwind, Bootstrap, Ant Design, Redux, Context, Hooks, GraphQL (Apollo), Gatsby, Webpack, SASS / LESS, AWS Amplify, Next, Jest, React Testing Lib, Tailwind, PrimeReact.

Back-end: Microservices, NodeJS, Java, Quarkus, Express, Koa, GraphQL (Apollo Client), Domain Driven Design, Typescript, Serverless Framework, Python, Flask.

Cloud Services: AWS ECS, EC2, SES, SNS, SQS, RDS, DocumentDB, Load Balancers, API Gateway, AWS Lambda, Vercel, Netlify, OpenAI.

Databases: Mongo, Postgres.
